Dinh Duc Long

AI Engineer

0867556109 longduc31st@gmail.com Ha Dong, Ha Noi github.com/may31st linkedin.com/in/may31st/

SUMMARY

Information Technology undergraduate focused on Artificial Intelligence, Machine Learning, and Natural Language Processing, with experience developing RAG systems, building AI agents with LangGraph, and deploying containerized applications using FastAPI and Docker to address practical business needs.

EDUCATION

University of Transport Technology (UTT) 2022 – 2026
Major: Information Technology

VinUniversity (VinUni) Sep 2026 – Present
AI Practical Talent Development Program – Cohort 4

EXPERIENCE

Kaigents Corp Sep 2025 – Feb 2026
AI Engineer Intern

- Evaluated RAG, fine-tuning, and rule-based approaches for internal deployment and built RAG workflows with LangGraph.
- Developed backend APIs and orchestrated an OCR, NLP spell-correction, and resume-extraction pipeline with LangGraph to digitize candidate resumes for an internal HR platform.
- Presented findings and technical trade-offs to non-technical stakeholders to support decisions on internal AI deployment.

SKILLS

Programming	Python, SQL
AI & Machine Learning	RAG, NLP, LLM Integration, Transformers, Multi-Agent Systems, Fine-Tuning, Prompt Engineering
Frameworks & Libraries	LangGraph, LangChain, PyTorch, TensorFlow, FastAPI
Data & Databases	PostgreSQL, MySQL, ChromaDB, Pandas, NumPy
Tools & Deployment	Git/GitHub, Docker, Kubernetes, n8n, Langfuse
Languages	English (technical reading and workplace communication), Vietnamese (native)

PROJECTS

VFServ | AI Engineer Sep 2026 – Present
Python, FastAPI, LangGraph, LangChain, Langfuse, ChromaDB, PostgreSQL, Docker, Vercel
GitHub: github.com/AI20K-Build-Phase-Cohort-4/P-142
Demo: vfserv-ai.vercel.app

- Built an AI-powered support platform for VinFast EV customers, combining conversational assistance, technical- document retrieval, and image analysis to help staff review and handle service requests.
- Developed a LangGraph customer-support agent covering four request categories, safety guardrails, and structured case briefs; built persistent memory with summarization, fact correction, and expiration.
- Collected and categorized technical documentation for RAG using ChromaDB; integrated Vision APIs for dashboard- warning analysis and image routing.
- Implemented PostgreSQL persistence, containerized the application with Docker Compose, and built test datasets and automated tests for agent workflows, memory consistency, and API behavior.
- Integrated Langfuse to trace agent workflows and monitor LLM token usage and latency, supporting debugging and performance analysis.

HomeNest Mar 2026 – May 2026
Python, LangChain, ChromaDB, FAISS, JavaScript, FastAPI, MySQL, Docker
GitHub: github.com/may31st/HomeNest

- Built a smart room-rental platform with a Vietnamese AI chatbot, combining RAG, geospatial search, and LLMs to recommend accommodations from over 7,000 live listings; deployed a Node.js, React.js, and Python full-stack application via Docker Compose.
- Developed an end-to-end RAG pipeline across crawling, preprocessing, semantic chunking, and ChromaDB embeddings, processing over 7,000 real-world rental listings.
- Designed a Vietnamese query-understanding module using Underthesea and Regex to extract price, room type, district/city, and amenities; classified intents to optimize pipeline routing.
